**E-Transit Software Included in Mass Transit Magazine's "Top Tech Innovations 2010"****Bridgeport, PA -- February 2, 2010**

A software package developed by E-Transit, Inc. ([www.etransit.us](http://www.etransit.us)) is a critical component of a state-of-the-art, *indoor* real-time bus location system that uses RFID technology to improve the operational efficiency of the 900 buses operated by Minneapolis Metro Transit (the 18th largest transit system in the USA). The roof of each bus is tagged with an ultra wide band RF transponder that sends real-time location signals to antennas installed inside each of five (5) indoor parking garages, where normal GPS location technology cannot be used.

The E-Transit-designed software receives real-time, ultra-precise (within 0.5 meter) bus location information and uses this information to populate web browser based graphical displays and database-driven reports. These screens and reports identify the location of each bus within each garage, along with other information, including the specific type of bus its maintenance schedule, whether the bus has been transferred to another garage, etc.

The software runs on agency-provided web servers that make the applications available to authorized PC users throughout the Metro Transit Intranet.

**About E-Transit:**

E-Transit is a leader in information and control systems for the transportation, ports, and security industries. Our team includes experienced systems professionals who provide consulting, hardware/software design, and system integration services for intelligent transportation, security, toll and revenue collection, point of sale, industrial control, and auditing applications. We use off-the-shelf components, standardized communication protocols, open computing systems, and conservative design practices.

The Company has ongoing projects and installations in the USA, and abroad. The company E- was founded in 2000 and operates from offices in Bridgeport, Pennsylvania (approximately 20 miles from Philadelphia).
