E-Transit Deploys Innovative Portable Toll Collection System

Bridgeport, PA -- January 10, 2013

As a subcontractor to ACS Transportation Solutions, E-Transit developed a portable toll collection system software package for the Louisiana Department of Transportation's LA 1 Bridge at Leeville, LA.

This Windows 7 based application runs on a ruggedized notebook computer and allows an operator to classify vehicles and collect tolls using cash or credit cards. Credit cards are validated in real-time via a third-party high-speed payment gateway.

The system is fully portable and uses mobile data technology for credit card processing as well as transmission of individual vehicle transaction records to an external computer system for subsequent auditing, traffic analysis, etc.

The system went "live" on January 5, 2013.

About E-Transit:

E-Transit is a leader in information and control systems for the transportation, ports, and security industries. Our team includes experienced systems professionals who provide consulting, hardware/software design, and system integration services for intelligent transportation, industrial security, toll and revenue collection, port security, point of sale, industrial control, and auditing applications.

The Company has ongoing projects and installations in the USA, and abroad. The company E- was founded in 2000 and operates from offices in Bridgeport, Pennsylvania (approximately 20 miles from Philadelphia).
