

Hammock Dunes Bridge Toll Collection System Goes Live

Bridgeport, PA – November 18, 2016

E-Transit designed and deployed a complete toll collection system for this 2-lane bridge in SE Florida. Each lane is equipped for manned and unmanned operation.

The system includes lane controllers, Linux based plaza/host server (with toll collection system management functions as well as ETC customer service/back-office applications), touch screen toll terminals, sunlight readable LCD patron fare displays, receipt printers, barcode readers, loops, fiber-optic treadles, digital video audit system, integration of multiple legacy payment methods, including multiple types of barcodes cards and stickers.

Interactive custom touch-screen “self-serve” customer kiosks installed in the lobby allow people to start new accounts, manage existing accounts, apply replenishments, etc.

A unique feature of this system is a 10-trip card (similar to a gift card) that visitors and “snowbirds” can purchase.

About E-Transit:

E-Transit is a leader in information and control systems for the transportation, ports, and security industries. Our team includes experienced systems professionals who provide consulting, hardware/software design, and system integration services for intelligent transportation, security, toll and revenue collection, point of sale, industrial control, and auditing applications. We use off-the-shelf components, standardized communication protocols, open computing systems, and conservative design practices.

The Company has ongoing projects and installations in the USA, and abroad. The company E- was founded in 2000 and operates from offices in Bridgeport, Pennsylvania (approximately 20 miles from Philadelphia).
